

Kalyan Sai Raju

Senior Data Engineer | GCP | BigQuery | Python | Apache Airflow | SQL | ETL/ELT

Phone: +91-9063962252 Email: kalyanbrahmandabheri@gmail.com

Summary

- ❖ Data Engineer with 6.9 years of overall experience in data engineering, ETL/ELT, database development, data migration, BI and reporting across cloud and on-premise environments.
- ❖ Strong hands-on experience with SQL Server, T-SQL and SSIS, including stored procedures, views, UDFs, indexes, incremental loads, UPSERT processing, data validation and reconciliation.
- ❖ Worked with GCP technologies including BigQuery, Google Cloud Storage and Pub/Sub for cloud-based data preparation, ingestion, transformation and analytics workflows.
- ❖ Experience with Azure Data Factory for scheduled and incremental data processing, source-to-target data movement, pipeline monitoring and SQL-based transformation workflows.
- ❖ Exposure to Python scripting and Apache Airflow DAG concepts for data transformation, automation, scheduling, task dependencies and pipeline orchestration.
- ❖ Good experience in SQL performance troubleshooting, data-quality investigation, long-running query analysis, duplicate handling and production support.

IT Proficiency

- ❖ Cloud & Data Engineering: **GCP, BigQuery, Google Cloud Storage, Pub/Sub**, Azure Data Factory, **ETL/ELT**, Incremental Loads, Historical Loads, UPSERT, Data Migration.
- ❖ Programming & SQL: **Python, SQL, T-SQL, Stored Procedures, Views, UDFs, CTEs, Joins, DDL/DML, YAML.**
- ❖ Workflow Orchestration: **Apache Airflow / DAG**, ADF scheduling and orchestration, SSIS control-flow and data-flow processing.
- ❖ Databases: SQL Server 2017/2019, **BigQuery**, Oracle.
- ❖ Data Quality & Performance: Reconciliation, duplicate/NULL checks, query optimization, indexing, source-to-target validation, troubleshooting.
- ❖ CI/CD & Version Control: **Git, GitHub, Azure DevOps, branching, commits, pull requests, Visual Studio/SSDT.**

Professional Experience

- Senior IT Consultant - Survik Software Pvt. Ltd. (Client: Bridgetree / Asurion) from May 2026 to Sep 2026.
- Database Developer - I in Mirra Healthcare Services India Pvt. Ltd. from Mar 2024 to Jan 2026.
- Data Engineer in News Corp from Jan 2022 to Mar 2024.
- Software Engineer with NetAmbit from Oct 2019 to Jan 2022.

Projects

Project #4

Project Title : Asurion Channels Modernization

Role : Senior IT Consultant / Senior Data Engineer - SQL & ETL

Technology : SQL Server, SSIS, T-SQL, Snowflake, Python, Azure DevOps, Git, Visual Studio/SSDT

Date : May 2026 to Sep 2026

Description :

Worked on ETL and database modernization for Asurion channel solutions supporting Asurion, AT&T and Verizon data flows across SMS, Direct Mail, Email and POM delivery processing.

RESPONSIBILITIES:

- ❖ Designed, enhanced and tested ETL/data pipelines for SMS, DM, EM and POM delivery workflows across multiple channel databases.
- ❖ Developed Python-based data pipelines to automate data extraction, transformation, validation, and source-to-target processing as part of ETL workflows.
- ❖ Implemented incremental-load and UPSERT processing using source deduplication, key-based lookups and change detection to insert new records, update changed records and prevent duplicate processing on reruns.
- ❖ Developed complex T-SQL, CTEs and stored-procedure logic for transformation, source-to-target validation, reconciliation, duplicate checks and record-count verification.
- ❖ Built data-quality and audit controls including row counts, error details, GUID tracking, failure handling and success/failure email notifications.
- ❖ Resolved schema and metadata mismatches across Asurion, AT&T and Verizon databases, including datatype, length and nullability differences.
- ❖ Used Git and Azure DevOps for feature branches, commits and pull requests and worked with QA/business teams on testing, defect resolution and release validation.

Project #3

Project Title : Claims Adjudication Reporting

Role : Data Engineer / Database Developer - I

Technology : Azure Data Factory (ADF), Azure Cloud, SQL Server, SSIS, SSRS, T-SQL, BigQuery, Cloud Storage, Looker Studio

Date : Mar 2024 to Jan 2026

Description :

Worked on healthcare claims reporting solutions using claim-level and service-line datasets for finance and operations.

Supported ETL development using ADF, SQL Server and SSIS and reporting through SSRS and Looker Studio.

RESPONSIBILITIES:

- ❖ Designed and supported Azure Data Factory pipelines for source-to-target data movement, scheduled ETL workflows and incremental processing.
- ❖ Built parameter-driven ADF processing using Linked Services, Datasets, Copy Activity, Lookup, ForEach and Stored Procedure activities.
- ❖ Integrated SQL stored procedures and transformation logic with ADF pipelines to implement business-rule validations, transformations and post-load processing.
- ❖ Implemented incremental load processing to load only new or changed records, reducing unnecessary data movement and improving pipeline execution time.
- ❖ Developed and supported SSIS ETL packages and handled incremental and historical loads for monthly and trend-based reporting.
- ❖ Wrote and optimized complex T-SQL stored procedures, views, queries and reporting extracts.
- ❖ Performed data validation and reconciliation and worked with business users to investigate discrepancies and deliver reporting changes.
- ❖ Worked with 837 Professional, Institutional and Dental claims data for claim-level and service-line reporting.

Project #2

Project Title : NEWS UK TECH

Role : Data Engineer

Technology : GCP, BigQuery, Google Cloud Storage, Pub/Sub, SQL Server, SSIS, SSRS, T-SQL

Date : Jan 2022 to Mar 2024

Description :

Supported customer, subscription, payment, retailer and digital-interaction data used by NEWS UK business, reporting and analytics teams.

RESPONSIBILITIES:

- ❖ Worked with GCP and BigQuery for cloud-based data preparation, transformation, validation and analytics datasets.
- ❖ Used Google Cloud Storage for data ingestion/exchange and worked with Pub/Sub as part of downstream data-processing workflows.
- ❖ Developed SQL-based ETL/ELT transformation logic for cleansing, joining, aggregating and preparing business datasets for reporting and analytics.
- ❖ Created recurring ETL processes for historical reporting data and monthly refresh requirements, maintaining approximately 13 months of historical data.
- ❖ Wrote and debugged T-SQL stored procedures, views, UDFs and SQL scripts to implement business rules and data transformations.
- ❖ Performed extraction, cleansing, missing-value handling, formatting, duplicate checks and source-to-target data validation.
- ❖ Worked on BigQuery query optimization by reducing unnecessary data scans and selecting only required columns instead of processing complete datasets.
- ❖ Used partitioned tables and partition filters in BigQuery to limit data scanned and improve performance for recurring reporting workloads.
- ❖ Supported production data issues, long-running query analysis and performance troubleshooting across ETL and reporting workflows.

Project #1

Project Title : Data Warehouse for East West Bank

Role : SQL Developer

Technology : SQL Server BI Developer (SSIS/SSRS), T-SQL

Date : Oct 2019 to Jan 2022

Description :

Worked on a SQL Server-based data warehouse for credit-card customer and financial-services data, providing centralized historical reporting and decision-support data.

RESPONSIBILITIES:

- ❖ Developed and debugged T-SQL queries, stored procedures, views and user-defined functions.
- ❖ Created database objects including tables, indexes and relational constraints to support data integrity and reporting.
- ❖ Built SSIS-based ETL, data migration and import/export processes for text/flat-file and SQL Server data.
- ❖ Implemented TRY/CATCH error handling and performed data validation after ETL and data migration activities.
- ❖ Used joins and CTEs to simplify complex SQL queries and transformation logic.
- ❖ Worked with normalization/denormalization and relationships using primary-key and foreign-key constraints.
- ❖ Managed SQL Server jobs and supported long-running query analysis and performance tuning.
- ❖ Performed duplicate, NULL and data-quality checks before loading data into target tables.
- ❖ Worked with senior developers and business teams to understand requirements, develop SQL changes and support testing.

Academic Qualifications

- ❖ Bachelor of Computer Applications (BCA) - Pursuing | KL University.
- ❖ Diploma in Mechanical Engineering from Government Polytechnic, Nalgonda - 2018.
- ❖ S.S.C from Government High School, Tekulapally - 2011.
